Task Assessment (Laravel Developer)

Read the following instructions carefully:
- **You can send the source code directly to us or please use any Private Git Repositories.**
- **Provide necessary instructions to run the code.**
- **Please attach screenshots of the output too.**
- **Deadline: 11:30 PM, Sunday, August 02, 2021.**

Basically, a project to manage companies and their employees. Mini-CRM.

1. Use **Laravel api, React/Vue, Bootstrap**
2. Basic Laravel Auth: ability to log in as administrator
3. Use database seeds to create first user with email admin@admin.com and password "password"
4. CRUD functionality (Create / Read / Update / Delete) for two menu items: **Companies** and **Employees**.
5. Companies DB table consists of these fields: Name (required), email, logo (minimum 100×100), website
6. Employees DB table consists of these fields: First name (required), last name (required), Company (foreign key to Companies), email, phone
7. Use database migrations to create those schemas above
8. Store companies logos in **storage/app/public** folder and make them accessible from public
9. Use basic Laravel resource controllers with default methods – index, create, store etc.
10. Use Laravel's validation function, using Request classes
11. Use Laravel's pagination for showing Companies/Employees list, 10 entries per page
